EGR Coolers

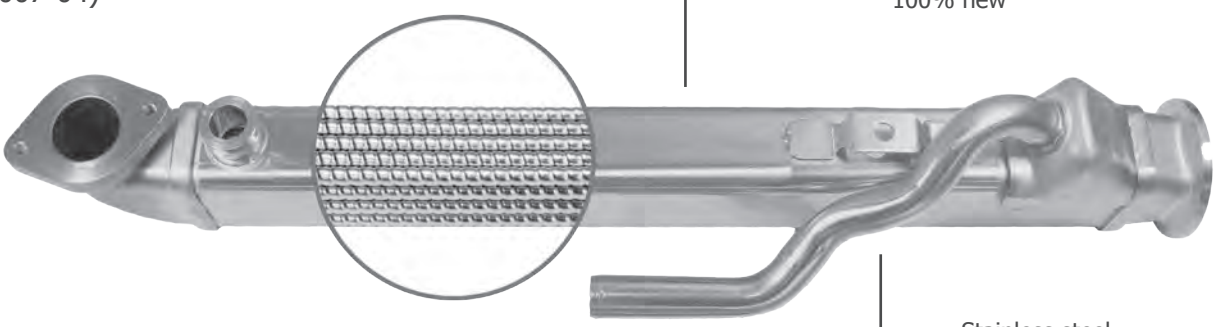

Not All EGR Coolers Are Designed the Same

EGR coolers use engine coolant to reduce exhaust gas temperatures before the gas is recirculated through the intake system. Reducing exhaust gas temperatures is critical for reducing NOx emissions. Plus, engines that run with higher EGR temperature don't adequately cool the combustion, which can reduce the life expectancy of the EGR valve, engine valves, and head gaskets.

Not all EGR coolers are the same. The original equipment EGR cooler's fin-and-tube-style design is prone to clogging and leaking. Additionally, many aftermarket EGR coolers feature various tube designs that do not provide the necessary cooling. Providing a superior alternative to both designs, NAPA® Echlin® is proud to offer an EGR cooler with an upgraded 20 spiral tube design. Take a look at our EGC202, for example:

EGC202

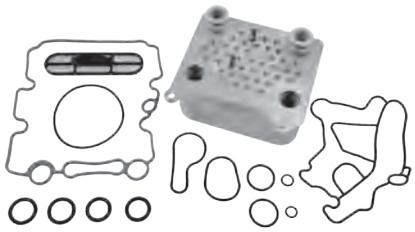

Ford F Series & Excursion w/6.0L (2007-04)
Ford E-Series w/6.0L (2010-04)
Navistar VT 365 Engines (2007-04)

Comes with intake manifold gaskets, seals, and hardware for a complete EGR cooler install

Tech Tip: When replacing an EGR cooler, experts recommend inspecting and servicing the oil cooler, too.

OIL202 - Diesel Oil Cooler Kit

The Benefits of a 20 Spiral Tube Design

The OE EGR cooler features a tube-and-fin-style design that is prone to clogging from soot and to internal leaks from fractures caused by overheating. To address the design flaw, our EGR cooler features a 20 spiral tube construction that resists soot clogging and prevents leaks to maintain proper system flow and pressure. Plus, our design provides the same cooling efficiency as the OE design.

NAPA® Echlin® EGC202
Design: 20 spiral tubes
Effect: Provides OE-matching cooling efficiency while resisting soot clogging and maintaining necessary system flow and pressure

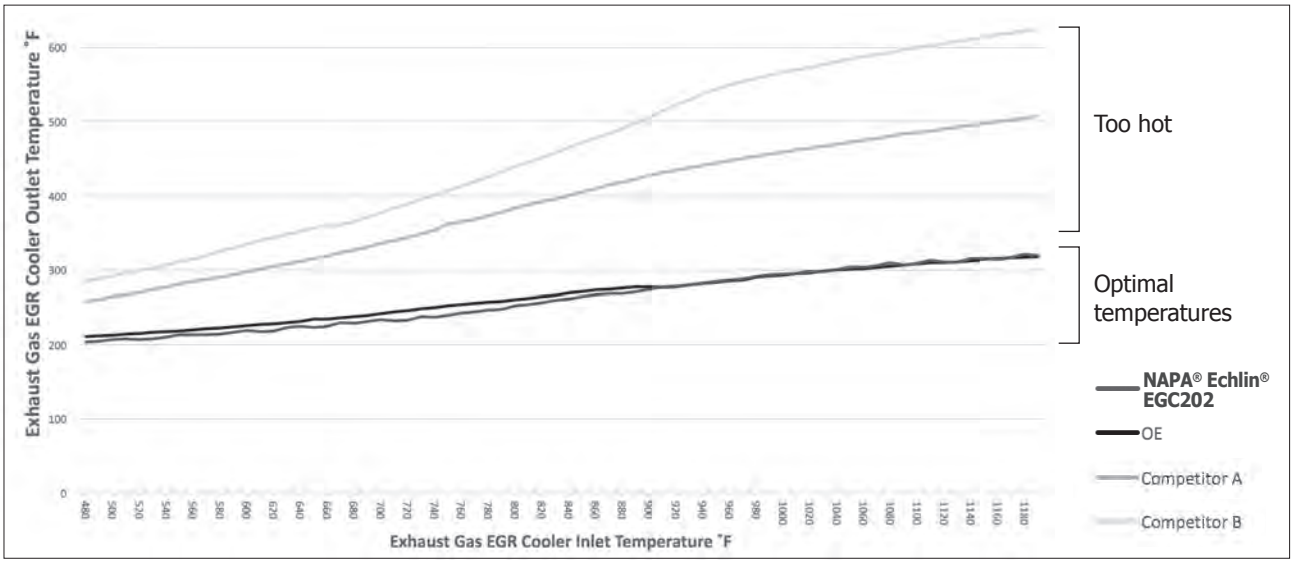

OE
Design: Fin-and-tube
Effect: Although this design is efficient, it's prone to soot clogging and internal leaks from fractures caused by overheating

Competitor A
Design: 6 spiral tubes
Effect: Exhaust gas temperatures that are hundreds of degrees hotter than OE specs, which can reduce the life expectancy of the EGR valve, engine valves, and head gaskets

Competitor B
Design: 6 straight tubes
Effect: The straight tubes are less efficient than spiral tubes, which creates even hotter exhaust gas temperatures than Competitor A

Tested to Ensure OE Cooling Efficiency

Most aftermarket suppliers fail to adequately test their EGR coolers for proper performance. We subject our EGR Coolers to 100% factory testing for air and water leaks. To see how our EGC202 EGR Cooler performs against both the OE and our aftermarket competitors, see the results of our heat exchange test above. Note that vehicles with exhaust gas temperatures not in the optimal temperature range are at risk of failing NOx emissions inspections.

Les refroidisseurs RGE

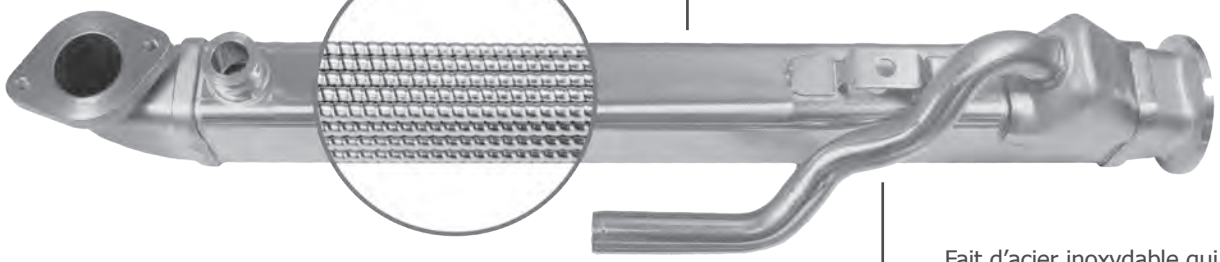

Les refroidisseurs RGE ne sont pas tous de conception égale

Les refroidisseurs de systèmes RGE utilisent du liquide de refroidissement pour abaisser la température des gaz d'échappement avant leur réacheminement dans le circuit d'admission. La réduction de la température des gaz d'échappement est cruciale pour la diminution des émissions d'oxyde d'azote (NOx). De plus, sur un moteur dont la température du système RGE est plus élevée, les gaz de combustion ne sont pas refroidis adéquatement, écourtant ainsi la durée de vie potentielle de la soupape RGE, des soupapes du moteur et des joints de culasse.

Cependant, les refroidisseurs RGE ne sont pas tous égaux. La conception à tubes à ailettes des refroidisseurs RGE d'équipement d'origine les rend sujets au colmatage et aux fuites. En outre, bon nombre de refroidisseurs RGE de rechange sont munis de tubes de configurations variées qui ne sont pas en mesure de fournir le refroidissement requis. Ayant mis au point une solution de rechange supérieure à ces deux types de conception, NAPA® Echlin® est fière d'offrir un refroidisseur RGE amélioré à 20 tubes hélicoïdaux. Jetez un coup d'œil à notre modèle EGC202, par exemple :

EGC202

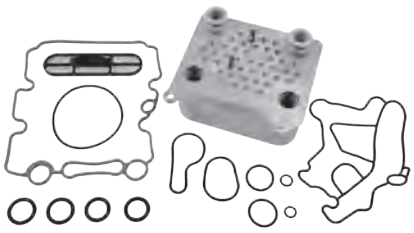

Ford série F et Excursion avec moteur de 6,0 L (2004-2007)
Ford série E avec moteur de 6,0 L (2004-2010)
Moteurs Navistar VT 365 (2004-2007)

Joints de tubulure d'admission, bagues d'étanchéité et quincaillerie compris, permettant de réaliser une installation complète du refroidisseur RGE.

Conseil technique : Au moment de remplacer un refroidisseur RGE, les experts recommandent aussi l'inspection et l'entretien ou le remplacement du refroidisseur d'huile.

Les avantages d'une conception à 20 tubes hélicoïdaux

Le refroidisseur RGE d'équipement d'origine avec tubes à ailettes est sujet au colmatage par la suie et aux fuites internes causées par les fractures de surchauffe. Afin de corriger ce défaut de conception, nous avons doté notre refroidisseur RGE de 20 tubes hélicoïdaux qui le rendent résistant au colmatage par la suie et aux fuites afin de maintenir le débit et la pression appropriés du système. Par ailleurs, notre conception fournit la même efficacité de refroidissement que celle de la pièce ÉO.

NAPA® Echlin® EGC202
Conception : Vingt (20) tubes hélicoïdaux
Effet : Produit un refroidissement d'une efficacité équivalente à celle de la pièce d'origine, mais sans les problèmes de colmatage et de fuite, tout en maintenant le débit et la pression nécessaires dans le système.

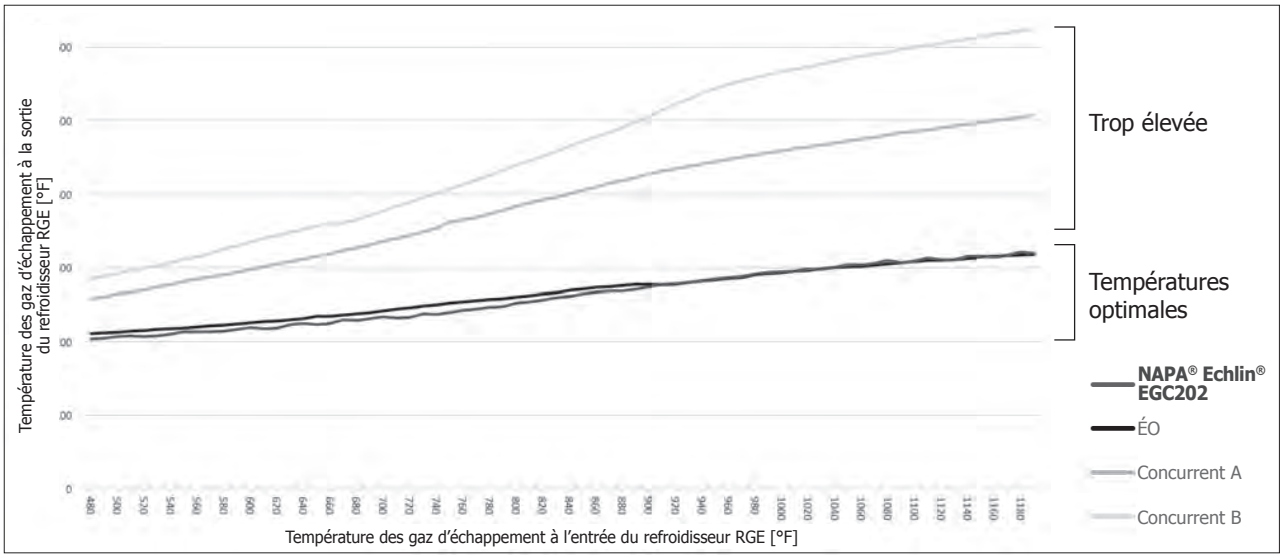

ÉO
Conception : Tubes à ailettes
Effet : Malgré l'efficacité de cette conception, celle-ci rend la pièce sujette au colmatage par la suie et aux fuites internes causées par les fractures de surchauffe.

Concurrent A
Conception : Six (6) tubes hélicoïdaux
Effet : Les gaz d'échappement sont jusqu'à des centaines de degrés plus chauds que les seuils spécifiés par les fabricants d'équipement d'origine, ce qui écourte la durée de vie potentielle de la soupape RGE, des soupapes du moteur et des joints de culasse.

Concurrent B
Conception : Six (6) tubes droits
Effet : Les tubes droits sont moins efficaces que les tubes hélicoïdaux, de sorte que la température des gaz d'échappement est encore plus élevée que celle que produit la pièce du concurrent A.

Des tests assurent un refroidissement correspondant à celui de l'ÉO

La plupart des fournisseurs de pièces de rechange négligent de tester leurs refroidisseurs RGE afin d'en vérifier le niveau de performance. Cependant, nos refroidisseurs RGE sont testés à 100 % en usine sur le plan de l'étanchéité à l'air et à l'eau. Pour voir la performance de nos refroidisseurs RGE EGC202 comparativement à celle des refroidisseurs d'équipement d'origine et de nos concurrents de l'après-marché, regardez les résultats de nos tests d'échange thermique ci-dessus. Notez bien que les véhicules dont la température des gaz d'échappement se situe hors de la plage optimale courent le risque d'échouer à l'inspection des émissions d'oxyde d'azote (NOx).

Enfriadores de EGR

No todos los enfriadores de EGR están diseñados de igual manera

Los enfriadores de EGR o de recirculación de los gases del escape, utilizan refrigerante para motores para reducir las temperaturas de los gases del escape antes de recircular el gas a través del sistema de admisión. Reducir las temperaturas de los gases del escape es fundamental para reducir las emisiones de NOx. Además, los motores que funcionan con una temperatura más alta en EGR no enfrían la combustión correctamente, lo que puede reducir la expectativa de vida de la válvula EGR, las válvulas del motor y las juntas de los cabezales.

Pero no todos los enfriadores de EGR son lo mismo. El diseño estilo aleta y tubo del enfriador EGR original tiene tendencia a la obstrucción y pérdida. Además, muchos repuestos de enfriadores de EGR presentan distintos diseños de tubo que no brindan el enfriamiento necesario. Al brindar una alternativa superior a ambos diseños, NAPA® Echlin® se enorgullece de ofrecer un enfriador de EGR con un diseño actualizado de 20 tubos en espiral. Echemos un vistazo a nuestro EGC202, por ejemplo:

EGC202

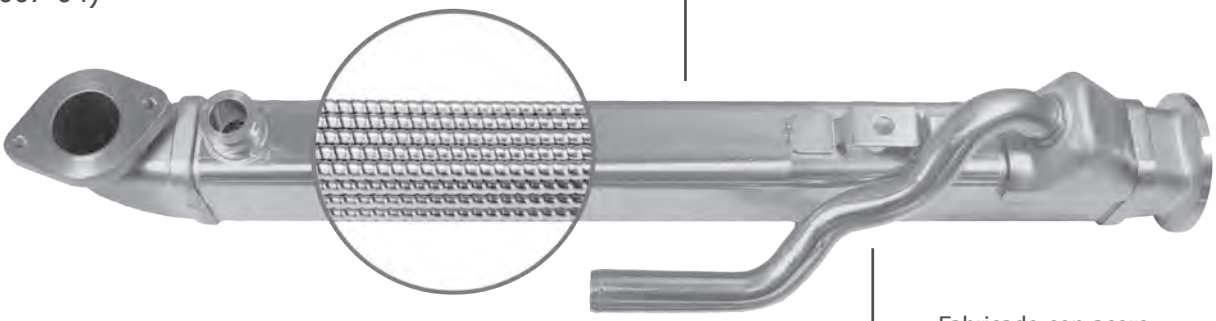

Ford Serie F y Excursion con motor de 6,0 litros (2007-04)

Ford Serie E y Excursion con motor de 6,0 litros (2010-04)

Motores VT 365 Navistar (2007-04)

El diseño actualizado con 20 tubos en espiral brinda a la pieza original eficiencia de enfriamiento a la vez que evita la obstrucción y las pérdidas.

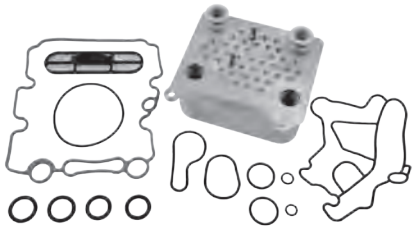

100% nuevo

Fabricado con acero inoxidable, maximiza la resistencia a la corrosión y la estabilidad dimensional.

Viene con juntas, sellos y accesorios para el colector múltiple de admisión para la instalación completa del enfriador de EGR.

OIL202 – Kit para enfriador de aceite diesel

Consejo técnico: Al cambiar un enfriador de EGR, los expertos recomiendan también inspeccionar y realizar el servicio del enfriador de aceite.

DIÉSEL

Los beneficios del diseño con 20 tubos en espiral

El enfriador de EGR original presenta un diseño estilo tubo y aleta que tiene tendencia a la obstrucción causada por el hollín y pérdidas internas por fracturas provocadas por el recalentamiento. Para corregir esa falla de diseño, nuestro enfriador de EGR presenta un diseño de tubo con 20 espirales que resiste la obstrucción con hollín y evita las pérdidas para mantener el flujo y la presión adecuada del sistema. Además nuestro diseño brinda la misma eficiencia de enfriamiento que el diseño original.

EGC202 de NAPA® Echlin®
Diseño: 20 tubos en espiral
Efecto: Proporciona un enfriamiento eficiente comparable al del producto original a la vez que resiste la obstrucción causada por hollín y mantiene el flujo y presión necesarios del sistema.

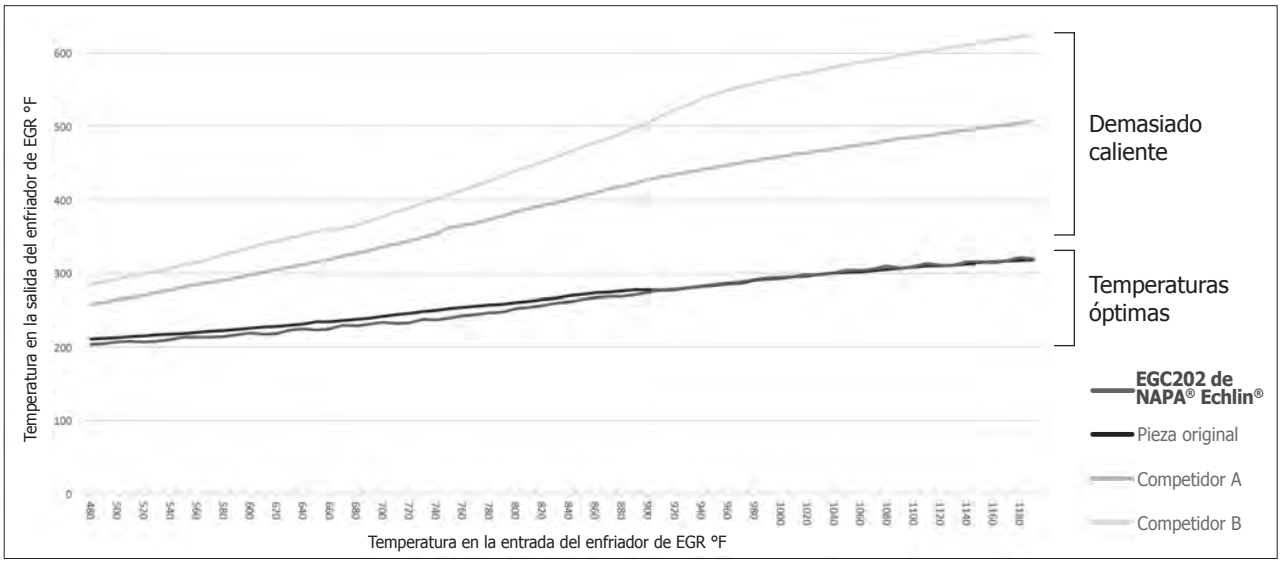

Pieza original
Diseño: Aleta y tubo
Efecto: Aunque este diseño es eficiente, tiene tendencia a la obstrucción causada por hollín y a las pérdidas internas debido a fracturas causadas por el recalentamiento.

Competidor A
Diseño: 6 tubos en espiral
Efecto: Temperaturas del gas del escape que son cientos de grados más calientes que las especificaciones del original, lo cual puede reducir la expectativa de vida de la válvula EGR, las válvulas del motor y las juntas del cabezal.

Competidor B
Diseño: 6 tubos rectos
Efecto: Los tubos rectos son menos eficientes que los tubos en espiral, que crean temperaturas del gas de escape más elevadas que las del Competidor A.

Probado para garantizar la eficiencia en enfriamiento del original

La mayoría de los proveedores de repuestos no prueban adecuadamente sus enfriadores de EGR para garantizar su funcionamiento correcto. Sometemos a nuestros enfriadores de EGR a pruebas 100% en fábrica con el objeto de verificar las pérdidas de aire y agua. Para ver cómo funciona nuestro enfriador de EGR EGC202 contra uno original y los de nuestros competidores en repuestos, observe los resultados de nuestra prueba de intercambio de calor. Tenga en cuenta que los vehículos con temperaturas de gases del escape que no se ubican en el rango óptimo de temperatura están en riesgo de no aprobar las inspecciones de las emisiones de NOx.

Diesel Fuel Transfer Pump – New

Don’t Let a Faulty Fuel Transfer Pump Ruin Your New Fuel Injection Pump

The fuel injection pump can fail if the fuel transfer pump (a.k.a. lift pump) doesn’t supply enough fuel pressure. To protect the longevity of your replacement fuel injection pump, it is highly recommended that you also replace the fuel transfer pump.

As a high-quality replacement part, NAPA Echlin's 100% new Diesel Fuel Transfer Pump is designed to keep constant fuel flow from the vehicle fuel tank to the injection pump. The constant flow allows peak performance to remain consistent during vehicle operation.

Fuel Injection Control Module (FICM) Power Board

The Problem

On select Ford trucks, the low-quality electronics on the OE and competition's Fuel Injection Control Module Power Board can overheat and lead to failure.

FCM203
Ford 6.0L Diesel Trucks (2010-01)
VIO over 800,000

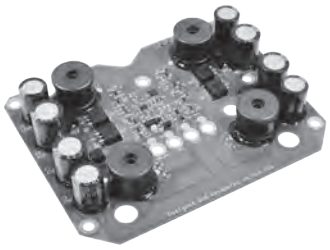

Our Response

Designed from the ground up at our state-of-the-art manufacturing facility in Orlando, FL, our Fuel Injection Control Module Power Board surpasses its counterparts in quality.

- Re-engineered power circuit board layout
- Higher-quality electronics cut down excess heat
- Four large coils on the circuit board that exceed OE specifications
- Gold-plated contacts for greater energy transfer
- Built-in load dump protection for reduced high-voltage interference
- No programming necessary
- New, NOT Remanufactured
- Designed and manufactured in the U.S.A.

Featuring a re-engineered layout, the power board is wired with higher-quality electronics that can protect critical components from excess heat. For proof, look at these thermal images. They were taken 1 minute after the power boards were loaded during a cold-start simulation.

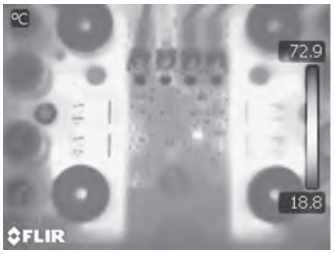

As you can see, our Fuel Injection Control Module Power Board distributes heat more evenly, keeping critical components cooler and preventing the failure that can occur in competitors' units.

Carte d'alimentation de module de commande d'injection de carburant (MCIC)

Problème des pièces d'origine

Sur certains camions Ford, le circuit électronique de piètre qualité de la carte d'alimentation du module de commande d'injection de carburant des constructeurs et de la concurrence peut surchauffer et subir une défaillance.

FCM203
Camions Ford, diesel de 6 L, 2001-2010
Plus de 800 000 VSR

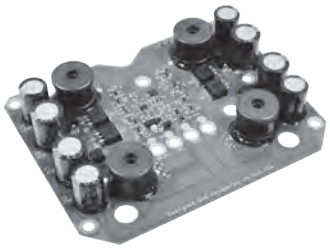

Notre réponse

Conçue et fabriquée d'un bout à l'autre à notre usine de fabrication de pointe située à Orlando, en Floride, notre carte d'alimentation de module de commande d'injection de carburant surpasse toutes ses concurrentes sur le plan de la qualité.

- Topologie restructurée de la carte de circuit d'alimentation
- Composants électroniques de meilleure qualité réduisant la chaleur extrême
- Quatre grosses bobines dépassant les spécifications des constructeurs
- Contacts plaqués or assurant un meilleur transfert de l'énergie
- Circuit de protection de surtension intégré qui prévient les perturbations causées par la haute tension.
- Aucune programmation nécessaire
- Neuve, et NON remise à neuf
- Conçue et fabriquée aux É.-U.

Avec sa configuration repensée, la carte de circuit imprimée porte des composants électroniques de meilleure qualité qui protègent les pièces vitales contre la chaleur extrême. Pour le constater, il suffit de regarder ces images thermiques. Ces images ont été prises 1 minute après que les cartes d'alimentation ont été chargées au cours d'une simulation de démarrage à froid.

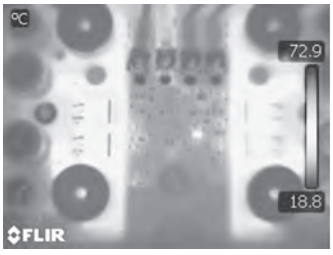

Comme on peut le constater, notre carte d'alimentation de module de commande d'injection répartit la chaleur plus uniformément, gardant les composants critiques plus frais et prévenant ainsi la défaillance que les cartes d'alimentation de la concurrence peuvent subir.

Plaqueta del módulo de control de inyección de combustible (FICM)

El problema

En ciertas camionetas Ford, los componentes electrónicos de baja calidad de la plaqueta del módulo de control de inyección de combustible del equipo original (OE) y del de la competencia pueden recalentarse y fallar.

FCM203
Camionetas Ford de 6,0 litros diésel (2001-10)
Más de 800.000 vehículos en funcionamiento

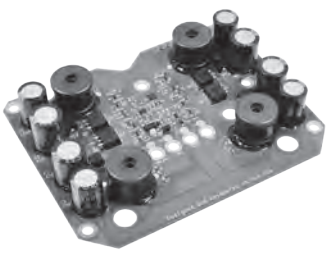

Nuestra respuesta

Diseñada desde cero, en nuestra planta de fabricación de vanguardia de Orlando, Florida, nuestra plaqueta del módulo de control de inyección de combustible supera a sus competidores en calidad.

- Diagrama de los circuitos impresos recreados por ingeniería.
- Los componentes electrónicos de mayor calidad reducen el exceso de calor.
- Cuatro bobinas grandes en la placa de circuitos que exceden las especificaciones del OE.
- Contactos enchapados en oro para una mayor transferencia de energía.
- No requiere programación.
- Protección incorporada contra picos máximos para evitar la interferencia de altas tensiones.
- Es nuevo, NO es refabricado.
- Diseñado y fabricado en los Estados Unidos.

Con un diagrama rediseñado por ingeniería, la plaqueta se encuentra conectada a componentes electrónicos de mayor calidad que pueden proteger a los componentes principales del calor excesivo. Para conocer la evidencia, échele un vistazo a estas imágenes térmicas. Se tomaron un minuto después de que se cargaran las plaquetas se cargaran durante una simulación de arranque en frío.

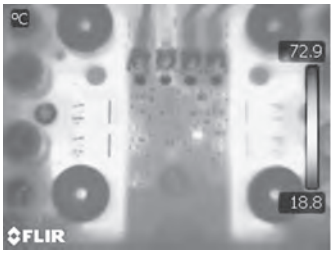

Como puede observar, la plaqueta del módulo de control de inyección de combustible distribuye el calor de manera más uniforme, manteniendo los componentes principales más fríos y evitando la falla que se produce en las unidades de la competencia.

THE WARRANTIES SET FORTH HEREIN ARE IN LIEU OF ALL OTHER WARRANTIES, WHETHER EXPRESS OR IMPLIED. ALL IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXCLUDED AFTER THREE (3) YEARS. NAPA® ECHLIN® IS NOT RESPONSIBLE FOR INJURY, PROPERTY DAMAGE OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING DIRECTLY OR INDIRECTLY OUT OF THE USE OF THIS PRODUCT (REGARDLESS OF THE FORM OF ACTION), NOTWITHSTANDING THE FACT THAT SAID INJURY, PROPERTY DAMAGE OR OTHER INCIDENTAL OR CONSEQUENTIAL DAMAGES AROSE DIRECTLY OR INDIRECTLY FROM AN ACTUAL OR ALLEGED DEFECT IN MATERIAL AND/OR WORKMANSHIP.
Some states do not allow limitations on how long an implied warranty lasts, or the exclusion of limitation of incidental or consequential damages, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights. You may also have other rights that vary from state to state.
